Compute Services

Researchers can upgrade their base-level computing service for a per-account monthly account maintenance fee to get:

- Higher priority access to available compute resources
- Higher compute resource limits
- Longer job times
- Access to advance rentals

The current resources limits that come with a Standard and Advanced account levels are:

Type	CPU Cores	GPUs	Memory	Time Limit (CPU)	Time Limit (GPU)
Standard	256	2	1024 GB	2 days	1 day
Advanced	512	4	2048 GB	4 days	2 days

These allocations apply to the `mit_normal` and `mit_normal_gpu` partitions. The "CPU Cores" and "Time Limit (CPU)" columns apply to the `mit_normal` partition, and the "GPUs" and "Time Limit (GPU)" columns apply to the `mit_normal_gpu` partition.

What does Medium and Higher Priority Mean?

With each account level you get an additional boost in Priority. Priority is a quantity that the scheduler uses to decide the order in which jobs run. It has a number of components, one of these is boosted with the Standard and Advanced account jobs. If three identical jobs were submitted at the base, Standard, and Advanced account levels, as resources become available the Advanced job would run first, Standard second, and base job third.

Once your account has been upgraded you will be provided a QOS and account string that you will need to add to your job flags to use your new allocations.

The charge for each can be found on the main ORCD site Storage and Compute Services page.

For any questions or to upgrade your account please reach out to us at orcd-help@mit.edu.

Advance Rental Reservations

Advance rental reservations are available to those with a Standard or Advanced account level. These reservations provide researchers guaranteed time slots for specific compute equipment, subject to availability and request lead time. We do this through reservations in Slurm.

The charge can be found on the main ORCD site Storage and Compute Services page.

Be sure to test your code thoroughly before setting up a reservation. Reservations cannot be changed or canceled 24 hours after they've been created. You should be completely ready to run your application once your reservation starts.

When your reservation is set up we will provide additional job flags that you will need to use to run jobs during your reservation.

For any questions or to request an advanced rental reservation please reach out to us at orcd-help@mit.edu.
